

## **“FRAME IT FORWARD” – HOW FRAME SELECTION CAN AFFECT INDEPENDENT PROPULSION**

*MARK P. ROBSON, CHARLES HARRISON*  
**Invacare Canada**

The choices available in the custom manual wheelchair world have never been greater. While choice is a nice luxury to have, it can often lead to confusion when selecting the appropriate manual wheelchair to maximize clinical benefits and functional outcomes. This workshop will focus on the advances in frame design and component technology for new generation folding and rigid manual wheelchairs. Comparisons will be made using frame materials and design. Upon completion, participants will be confident in prescribing the most appropriate frame choice to maximize end user propulsion.
