

**THE ASSESSMENT IS DONE:
NOW HOW DO I BUILD A WHEELCHAIR?**
KATHY FISHER, B.SC.(OT), ATS, OT REG.(ONT)
Shoppers Home Health Care

Once the assessment is completed the task of building a seating and mobility system begins. What all does this entail?

Translating the client measurements into a functional system has many considerations. The client's physical condition, age, daily activities and environment are some of the clues that will help determine how a functional system will be designed to meet the client's lifestyle.

Using case studies and activities, this presentation will provide participants with an opportunity to identify wheelchair parameters, client measurements and their combined impact on wheelchair set up.
